SENIOR SOFTWARE ENGINEER

I am a Full Stack Developer with over 20 years of experience in a variety of industries and technologies. I have worked in all phases of software development, but my primary focus has been in backend development with PHP and front ends using JavaScript and Vue.js. I have also done a lot of database work, designing schemas and optimizing complex queries in both MySQL and Postgres.

I excel at gathering customer requirements to design robust integrated systems that are user friendly while still being highly maintainable and scalable. My experience allows me to understand how pieces fit together to create reusable modular components. This strategy not only facilitates teamwork, but also accelerates the development cycle and allows for the creation of comprehensive test plans. I'm not married to any particular technology and love finding new solutions which is why I'm a big fan of developer interaction and code reviews.

I am seeking a position where I can take on a lead role in designing and implementing solutions to meaningful applications. But I'm not above debugging and maintaining existing code and have a lot of experience upgrading legacy systems to modern frameworks. Currently I am only seeking remote roles.

SKILLS

PHP Frameworks	Laravel 12, CodeIgniter 4, CakePHP 2
JavaScript Frameworks	Vue.js, jQuery (some React)
Languages	PHP, JavaScript ES6 / JSX, SQL, Powershell, BASH, DOS
